SUMMARY

AI Developer building LLM-powered prototypes and agentic workflows in fast-paced, resource-constrained environments. MS Artificial Intelligence (SJSU, May 2026). Hands-on with Python, RAG and semantic similarity search (pgvector), LangGraph agent orchestration, and LLM APIs (OpenAI, Claude). Ships end-to-end systems from document ingestion to deployed FastAPI services on AWS. Experienced collaborating across global, distributed teams; comfortable with ambiguous requirements and rapid iteration using Cursor, Claude Code, and Codex.

CORE COMPETENCIES

LLM APIs (OpenAI, Claude) RAG & Semantic Search AI Agent Development LangGraph Orchestration

Python & FastAPI PyTorch & ML Deployment Docker & AWS Git & Agile Delivery

EDUCATION

M.S. Artificial Intelligence | San Jose State University May 2026 | GPA: 3.6

B.E. Mechatronic Engineering | Ho Chi Minh City University of Technology Apr. 2023 | GPA: 3.5

TECHNICAL SKILLS

Languages: Python, C++, SQL, Bash

GenAI & Agents: LangGraph, RAG (pgvector), Neo4j, MCP, OpenAI Agents SDK, LLM APIs (OpenAI, Claude), FastAPI

AI Dev Tools: Cursor, Claude Code, Codex, Git, Docker Compose, AWS

Machine Learning: PyTorch, TensorRT, CUDA, Quantization, Edge AI (Jetson)

PROFESSIONAL EXPERIENCE

Software Integration Engineer (Automotive Safety Systems) Jun. 2023 -- Dec. 2023

Bosch Global Software Technologies Ho Chi Minh, Vietnam

- Delivered software integration for **8+ product variants** in a fast-paced release cycle, validating changes through automated SiL/HiL testing to certify production-ready patches on schedule.
- Isolated cross-variant integration failures, traced root causes, and communicated technical findings to stakeholders to unblock releases under tight deadlines.

Robotics Control Engineer (Student Researcher) Aug. 2022 -- Dec. 2022

Mechatronics Lab, HCMUT Ho Chi Minh, Vietnam

- Built closed-loop control and vision-based feedback systems in C++, demonstrating rapid prototyping and problem-solving in a resource-constrained research setting.

FEATURED AI PROJECTS

AI Enrollment Assistant: Agentic RAG Microservices | Python, FastAPI, LangGraph, pgvector, Neo4j, Docker Compose

- Built an LLM-powered Q&A system with **semantic similarity search** over ingested documents, enabling natural-language queries against an internal knowledge base (e.g., policy and enrollment FAQs).
- Designed **LangGraph** agentic workflows with HTTP tool-calling, pgvector retrieval, Neo4j graph gateway, and web search; containerized and deployed on **AWS** via Docker Compose.

AI Tutor: Multi-Agent Learning Platform | RAG, MCP, FastAPI, OpenAI Agents SDK

- Developed a multi-agent educational system that ingests documents to generate **cited answers**, adaptive quizzes, and follow-up questions -- parallel to smart candidate screening and personalized Q&A use cases.

Career-Ops Agent Workflow | Cursor, Claude Code

- Configured an open-source agent pipeline with personalized profile, evaluation rubrics, and portal targets for rubric-based JD evaluation, tailored resume generation, portal scanning, and application tracking -- daily-driver LLM workflow automation built with **Cursor** and **Claude Code**.
